RESEARCH AWARDS

2010

Purpose: To recognize students of the non-research programmes who do recognized research. We will recognize those who published papers in recognized forums by placing them in a "Research List", along the lines of honouring students for academic performance.

1. All UG students in their initial 4-year and all MTech students are eligible to be placed in the Research List. Students of the 4-year post-BSc programme in the first 3 years are also considered.

2. The students who have published a paper in a recognized forum, based on the work done in the first 4 years for UG/Dual-Degree students and the first 2 years for MTech students are eligible for recognition.

3. The list will be prepared for each academic year, i.e., from Aug 1st to July 31st of the following year. The acceptance of the paper should be informed within this time frame for eligibility for the list in the following academic year.

4. All students who satisfy the above can apply to be considered for the award. The application should be forwarded and recommended by a faculty member, typically the advisor who guided the work. They need to apply explicitly as central information on publications is not available.

5. Applications should give a complete and full citation in the standard format of the publication(s), along with the URL for the conference or journal in question. The URL for the work in IIIT's publications list is also necessary. (IIIT has a centralized publications portal to which you should enter each of your publications in any case.)

6. The award will be presented along with the Dean's List awards. The award will also be mentioned in the student's transcript like the Dean's List awards.
